

Project Plan & Task Breakdown

eCommerce — Winter 2026
Teacher: Tiago Bortoletto Vaz

Deliverable	3 of 3
Submission	Implementation, deployment, journal and presentation
Weight	23 % of the final grade

1. Overview

This is your final deliverable for this course! There should be nothing really new here, as you know already the required features for your project. I'll offer you more details about them in the next sections.

2. Required Deliverables

This final deliverable is in reality made of **four** deliverables:

2.1 Team Journal (PDF file to be submitted)

As you have done for deliverable 2, write a short journal entry that covers the following:

- What has each team member contributed since the last journal? Describe each person's work without repeating information that was previously reported. The best is each person writing his/her own journal to be validated by the team before submission.
- As a team, reflect on at least two challenges you faced during this project, and write about them.
- Once again, work together as a team to describe the most valuable knowledge you gained during the implementation of this project. You can include as many as you like, hopefully more than zero.

Note: this journal must be submitted as a PDF file to Omnivox. As it can contains personal thoughts, reflections and frustrations, I don't it to be in the repository.

2.2 Implementation (code available in your repository)

As stated in our course outline, your project should contain the following two components:

1. **Administrative interface:** Where administrators can log in, manage application content, and handle operations.
2. **User-facing interface:** Where users can browse content, manage their session-based transactions, and complete their requests.

Aspects to be integrated into the application include:

- **Administrative interface:**
 - Authentication and authorization with role-based access control.
 - Two-factor authentication (2FA)
 - CRUD operations for managing application content.
 - Secure file upload functionality. **(optional)**
- **User-facing interface:**
 - Content browsing organized by category with AJAX-based live search.
 - User registration and login with two-factor authentication (2FA).
 - Session-based transaction management.
 - A simple API endpoint enabling data integration with other software
 - Transaction completion workflow with confirmation.
- **Other concerns:**
 - Internationalization (i18n) supporting at least two languages.
 - Flash messages for user feedback (success, error, warning, info).
 - Service layer for centralized input validation.
 - Security: prepared SQL statements, password hashing, and XSS prevention.
 - Documentation: your application should contain a proper documentation for users willing to self-host it, including a SQL schema or a seed script.

Note: check instructions from Deliverable 1 and make sure you also follow all the requirements from the “Technical requirements” section.

2.3 Deployment

Your Web application should be reachable from the Internet. It means it needs to be hosted in a server containing a public IP address. Also, your website should contain:

1. A domain name properly configured in a Registrar of your choice
2. Automation: Your production environment must be integrated with your Git repository. The simplest accepted pipeline is a new release of your website being deployed via a Git push to your main branch.

2.4 Presentation

Teams will have 20 minutes to present their work, plus 10 minutes for questions and comments. Presentations should be structured as follows:

- Introduction to your project (motivation, description, use cases)
- Browsing your application (navigating through your application, demo'ing all the available features)
- Development process (explain how your team worked together, roles, tasks management, workflows, etc)
- Technical discussion (open your code and explain your architecture, design choices, and main features – this is not a line-by-line explanation of your code!)
- Open to questions and comments

Note: The quality of your presentation contributes to your grade. Speak loudly and clearly in a professional manner. Organise with your teammates to avoid confusion during the presentation. Avoid reading your notes; talk to the audience instead.

3. Submission Instructions

- Submit a single PDF file containing the title of your project, your names, the URL to browser your website, the URL of your public git repository and your Team journal.
- Only the new team leader submits on behalf of the team.
- Late submissions are subject to the course's standard late-penalty policy.

4. Academic Integrity

All submitted work must be the original work of the team. Suspected cases of academic dishonesty will be handled in accordance with Vanier's academic integrity policy. Please remind our conversation about using chatbots to write text for you. I'll be (even) more strict this time. LLM-style, empty & generic sentences won't be graded.

5. Grading Grid

This rubric details how Deliverable 3 will be evaluated (out of 23% of your final grade). Note that, despite weighting only 1%, your presentation and your ability to answer questions from the audience might impact your overall grade.

Component	Weight
Implementation (Code & Features)	15%
Deployment & DevOps	4%
Team Journal	3%
Presentation	1%
Total	23%

5.1. Implementation (Code & Features) — 15%

Criteria	Excellent	Partial	Weight
Functional Requirements	All required admin and user features fully implemented and functional.	Most features implemented; minor issues.	6%
Code Quality & Architecture	Clean structure, good separation of concerns.	Acceptable structure with some weaknesses.	5%
Security & Best Practices	Prepared statements, hashing, XSS prevention.	Some security aspects missing or unclear.	2%
Documentation & Repository	Clear README, setup instructions, SQL schema/seed, organized repo.	Basic or incomplete documentation.	2%

5.2. Deployment & DevOps — 4%

Criteria	Excellent	Partial	Weight
Live Application	Fully reachable online and stable.	Reachable with configuration issues.	2%
Domain & Hosting	Proper domain name correctly configured.	Hosted but domain partially misconfigured.	1%
Deployment Automation	Deployment triggered by git push (CI/CD or equivalent).	Partial automation or manual steps.	1%

5.3. Team Journal (PDF) — 3%

Criteria	Excellent	Partial	Weight
Individual Contributions	Clear, honest description for each member.	Descriptions are vague or uneven.	1%
Team Reflection	Meaningful discussion of challenges and solutions.	Superficial reflection.	1%
Learning Outcomes	Concrete technical and collaborative learnings.	Generic or limited learning.	1%

5.4. Presentation — 1%

Criteria	Excellent	Partial	Weight
Structure & Timing	Well-structured, clear flow, on time.	Minor structure or timing issues.	0.25%
Application Demo	All key features demonstrated clearly.	Most features shown.	0.25%
Technical Explanation	Clear explanation of architecture and decisions.	Surface-level explanations.	0.25%
Professional Delivery	Confident, clear speech, good coordination.	Delivery issues or uneven coordination.	0.25%
